

CS373 Group 01 Phase 1 Technical Report

Kevin Xu, Josh Yu, Ben Yu, Bryan Lee, Tyler Kubecka

February 14, 2024

Overview

Our website is hosted at brighterbeginnings.me using AWS Amplify. Currently it is configured to build automatically from our [GitLab repo](#).

Dependencies:

- React
- Bootstrap

Frontend

The front-end is a React app, which is what is running on AWS. You can build and run the app like this:

```
(in cs373-group-01/front-end)
npm install
npm run start
```

If running locally, it will be at localhost:3000 by default.
