

CS373 Group 01 Phase 1 Technical Report

Kevin Xu, Josh Yu, Ben Yu, Bryan Lee, Tyler Kubecka

February 14, 2024

1 Overview

Our website is hosted at brighterbeginnings.me using AWS Amplify. Currently it is configured to build automatically from our [GitLab repo](#).

Dependencies:

- React
- Bootstrap

1.1 Frontend

The front-end is a React app, which is what is running on AWS. You can build and run the app like this:

```
(in cs373-group-01/front-end)
npm install
npm run start
```

If running locally, it will be at localhost:3000 by default.
